EyeConnect

Your Mac Entertainment Unleashed

EyeConnect software enables your UPnP™ AV digital media device to stream EyeTV recordings, digital photos, music and movies from your Mac onto your TV or stereo.

EyeConnect™ is based on the globally trusted Universal Plug and Play™ Audio/Video standard (UPnP™ AV) for the seamless sharing of digital content throughout your home. Using this industry standard technology, EyeConnect™ enables a broad range of UPnP™ AV devices to play EyeTV recordings, digital music, video, or photo content, including iPhoto™, iTunes®, and movies stored on your Macintosh. Elgato's EyeConnect digital media streaming software addresses a rapidly growing market for home networking solutions for the Macintosh.

Use EyeConnect in combination with your UPnP™ AV digital media device to, manage wired or wireless streaming of stored multimedia content effortlessly:

EyeTV recordings: Watch EyeTV recordings on your TV in the comfort of your living room.

Pictures: View individual digital photos or your entire iPhoto™ library, on your TV. Play slideshows of your organized photo albums for the enjoyment of family and friends.

Music: Access your entire iTunes® music library and play MP3 music in Dolby® Digital sound on your home entertainment system.

Video & Home Movies: Access all the media in your Movies folder on your TV. The digital media player used determines the movie formats that are supported.

Digital media files remain organized as originally stored in your Mac libraries so you can quickly find the file you want.

Elgato's EyeConnect software supports device authentication and an advanced plug-in architecture that enables third-party developers to provide additional streaming content. An EyeConnect Plug-in SDK is available. Visit <http://www.elgato.com> for further details. Elgato is a member of the Digital Living Network Association (DLNA), the Intel Developer Network for the Digital Home and the UPnP™ Forum.

What is UPnP™ AV technology?

UPnP™ AV (Universal Plug 'n Play Audio/Video) technology is an open networking architecture that employs TCP/IP and other Internet technologies for the seamless flow of digital content throughout your home. UPnP™ AV products work easily with each other and do not require complex configuration.

Technical Information

EyeConnect supports the growing number of brand-name digital media players based on UPnP™ AV.

System Requirements

- A Macintosh computer with a PowerPC® G4 or G5 processor
- Mac OS X 10.3
- Minimum 20 MB free hard disk space
- iPhoto, iTunes installed for viewing photo and music content
- EyeTV installed for viewing EyeTV (digital TV recorder) recordings

Detailed information about EyeConnect can be found in the EyeConnect manual at www.elgato.com/documentation.
